

ULCER DRUGS

CLASS	ACTION	SIDE EFFECTS	INTERACTIONS	IMPLICATIONS/OTHER																		
ANTACIDS	<ul style="list-style-type: none"> -neutralizes gastric acid -raises the pH of the stomach -incr. resistance of lining to irritation -incr. tone of LES 	<u>Common SE</u> <ul style="list-style-type: none"> Al & Ca: Constipation Mg: Diarrhea <u>Serious SE</u> <ul style="list-style-type: none"> -rebound hyperacidity -sodium retention -hypermagnesemia -hypophosphatemia 	Tetracycline Phenothiazines Isoniazid (INH) Diazepam (VALIUM) Phenytoin (DILANTIN)	<ul style="list-style-type: none"> -take 1 hr after eating & do not take other meds within 1-2 hrs of antacid -avoid meds that decr. stomach pH or incr. acidity -chew tablets & take w/ 8 oz water -maintain a schedule for administration -monitor for side effects -teach about interactions w/ OTC's and prescribed meds 																		
H-2 ANTAGONISTS	<ul style="list-style-type: none"> -decr. gastric acidity -inhibits release of histamine 	<ul style="list-style-type: none"> -confusion -diarrhea/constipation -HA, dizziness -anxiety -hyotension -agranulocytosis -gynecomastia -impotence (TAGAMET) 	Cimetidine interacts w/: <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 50%;">Theophylline</td> <td style="width: 50%;">Phenytoin</td> </tr> <tr> <td>Ca Ch blockers</td> <td>Quinidine</td> </tr> <tr> <td>Carbamazepine</td> <td>Quinine</td> </tr> <tr> <td>Metoprolol</td> <td>Phenytoin</td> </tr> <tr> <td>Metronidazole</td> <td>Diazepam</td> </tr> <tr> <td>Lidocaine</td> <td>Warfarin</td> </tr> <tr> <td>Lorazepam</td> <td>Caffeine</td> </tr> <tr> <td>Sulfonylureas</td> <td></td> </tr> <tr> <td>Tricyclic antidepressants</td> <td></td> </tr> </table>	Theophylline	Phenytoin	Ca Ch blockers	Quinidine	Carbamazepine	Quinine	Metoprolol	Phenytoin	Metronidazole	Diazepam	Lidocaine	Warfarin	Lorazepam	Caffeine	Sulfonylureas		Tricyclic antidepressants		<ul style="list-style-type: none"> -limit caffeine intake -take before meals & at night -teach about SE -P450 inhibitor (TAGAMET)
Theophylline	Phenytoin																					
Ca Ch blockers	Quinidine																					
Carbamazepine	Quinine																					
Metoprolol	Phenytoin																					
Metronidazole	Diazepam																					
Lidocaine	Warfarin																					
Lorazepam	Caffeine																					
Sulfonylureas																						
Tricyclic antidepressants																						
PROTON PUMP INHIBITORS	<ul style="list-style-type: none"> -inhibits gastric secretion -inhibits release of histamine -long term tx of pathologic acid-hypersecretory states -used w/ 'triple therapy' of <i>H. pylori</i> 	<ul style="list-style-type: none"> -acute: mild (diarrhea, nausea) H/A 		<ul style="list-style-type: none"> -most widely used -most effective -acts at H-2 receptor 																		
PG DERIVATIVES	<ul style="list-style-type: none"> -inhibits gastric secretion -stimulates mucus secretion (mucotropic/cytoprotective) 	<ul style="list-style-type: none"> -diarrhea -oxytocic -potential dysmenorrhea -spotting 		NO use in pregnancy or women of child bearing age only approved use is prophylaxis of gastric ulcers in patients taking Ig. NSAIDS																		
ULCER COATING	<ul style="list-style-type: none"> -binds to damaged/necrotic tissue -short term tx of benign duodenal ulcers -tx of stress ulcers 	<ul style="list-style-type: none"> -potential constipation 	<ul style="list-style-type: none"> -binds to, inhibits absorption of many orally administered drugs 	<ul style="list-style-type: none"> -has no antacid activity 																		
Sucralfate (CARAFATE)
